

A

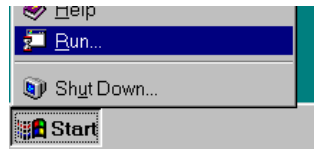

Install WinZip

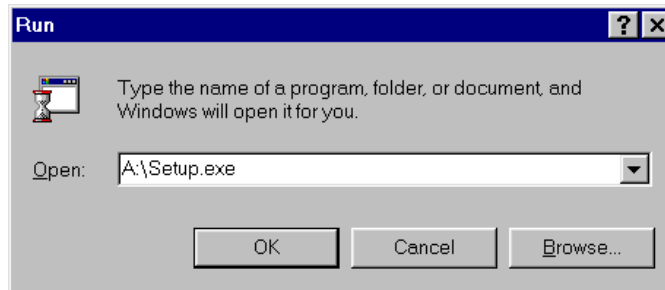

Guide on

WinZip compresses files which means less time transmitting them over the phone/Internet and therefore saves you money and valuable time!

Insert the floppy disk into Drive A: or make a note of where the install program is on your hard drive. Go to the task bar at the bottom of the screen and press the **Start** button and select **Run**:

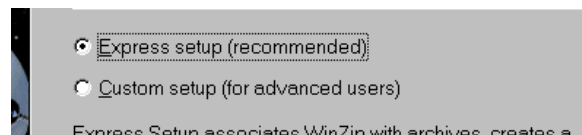

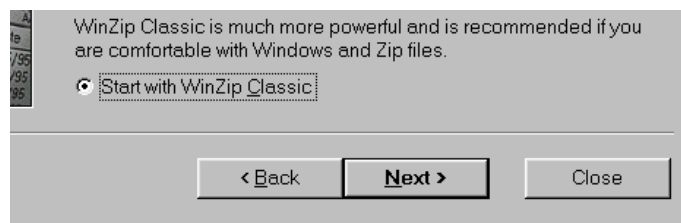

Make sure **A:\Setup.exe** is visible in the box if you are installing from floppy disk:

If you are installing from the hard drive, enter the correct location. You can click on **Browse...** to find it. Click **OK**. The computer will ask you where to install the software, you should just click on **OK** unless you really want to change the directory. It will then start to install.

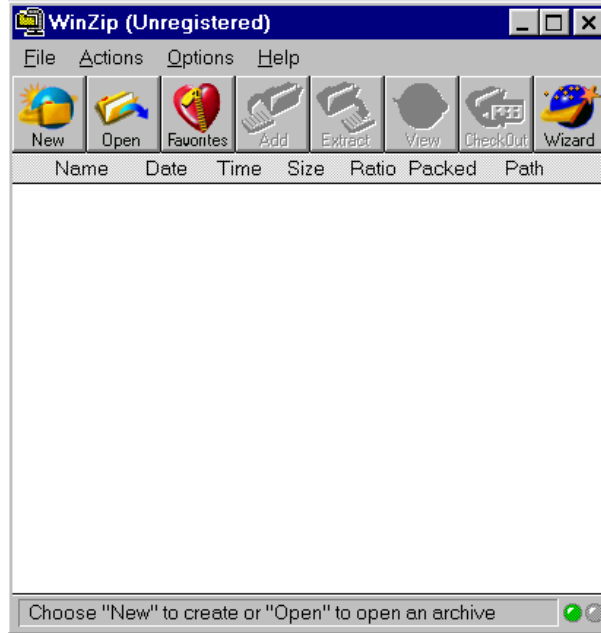

Click on **Next >** then click on **Yes** to agree to the terms of the License Agreement. Click on the **Start with WinZip Classic Box** and click **Next >**:

Now make sure that **Express Setup (recommended)** is selected. Click on **Next >**.

Take note of the brief tutorial information and click **Finish**. The tutorial will give you more detailed information rather than the bare minimum shown in our guides.

You then end up with the WinZip window:

Congratulations! You have now installed WinZip. For the minimum instructions needed on using it, see our other WinZip guides.

Please note: WinZip will continue to run even if you don't register it. Registering (i.e. paying for it) as far as I understand allows you free updates and stops the start-up window with the annoying **A**gree button from appearing.
